

RSP-750 series

■ Features :

- Universal AC input / Full range
- AC input active surge current limiting
- High efficiency up to 92%
- Built-in 12V/0.1A auxiliary power
- Built-in active PFC function, PF>0.97
- Protections: Short circuit / Overload / Over voltage / Over temperature / Fan alarm
- Output voltage can be trimmed between 40 ~ 110% by 2 ~ 5.5VDC external control signal
 Output current can be trimmed between 40 ~ 110% by 2 ~ 5.5VDC external
- control signal
- Forced air cooling by built-in DC with fan speed control function
- High power density 9.44w/inch³
- 1U low profile 41mm
- 10 low profile 41
- DC OK Signal
- Built-in remote ON-OFF control
- Built-in remote sense function
- 3 years warranty

RSP-750 series

RSP-750 series

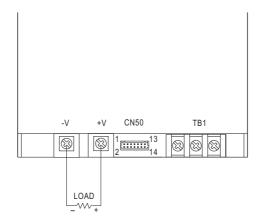

■ Function Description of CN50

Pin No.	Function	Description		
1	+S	Positive sensing. The +S signal should be connected to the positive terminal of the load. The +S and -S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V.		
2	+VS	+V Signal. The +VS should be connected to the +S to reduce the noise when "output voltage TRIM" function is in use.		
3	-S	Negative sensing. The -S signal should be connected to the negative terminal of the load. The -S and +S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V.		
4	-VS	-V Signal. The -VS should be connected to the -S to reduce the noise when "output voltage TRIM" function is in use.		
5	PV	Connect to external DC voltage source for output voltage triming, referenced to pin 10,11 (GND). Output voltage can be trimmed between 40 ~ 110% of the rated output voltage.		
6	PS	Short connecting between PV (pin5) and PS (pin6) if "output voltage TRIM" function is not used.		
7	PC	Connect to external DC voltage source for output current triming, referenced output current can be trimmed between 40 ~ 110% of the ra output current. Please refer to function manual for details.		
8	PO	Short connecting between PC (pin7) and PO (pin8) if output current trim function is not used.		
9	DC_OK	Open collector signal, referenced to pin10,11(GND). Low when PSU turns on. The maximum sink current is 10mA and the maximum external voltage is 5.6V.		
10,11	GND	These pins connect to the negative terminal (-V). Return for DC_OK Signal output.		
12	G-AUX	Auxiliary voltage output ground. The signal return is isolated from the output terminals (+V & -V).		
13	ON/OFF	Turns the output on and off by electrical or dry contact between pin 13 (ON/OFF) and pin 14 (12V-AUX). Short: Power ON, Open: Power OFF.		
14	12V-AUX	Auxiliary voltage output, 10.8~13.2V, referenced to pin 12(G-AUX). The maximum load current is 0.1A. This output is not controlled by the "remote ON/OFF control".		

■ Function Manual

1."Remote ON/OFF" and "Output voltage trim" and "Output current trim" functions are not used.

(1)The power supply unit will have no output if the shorting connector (accessory comes along with the PSU) is not assembled. It contains three shorting wires: one is from ON/OFF (pin13) to 12V-AUX (pin14), two is from PV(pin5) to PS (pin6) and the other is from PC (pin7) to PO (pin8). (2)Factory setting is shorted as Fig1.1

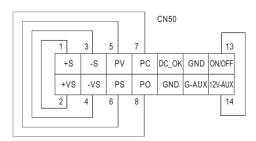

Fig 1.1 (Shorting connector)

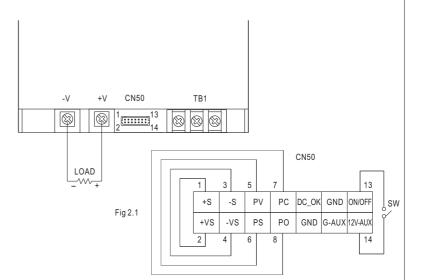

RSP-750 series

2.Remote ON/OFF

The PSU can be turned ON/OFF by using the "Remote ON/OFF" function

Between ON/OFF(pin13) and 12V-AUX(pin14)	Output Status
SW close (Short)	PSU ON
SW open (Open)	PSU OFF

3.DC_OK signal

"DC_OK" is an open collector signal.

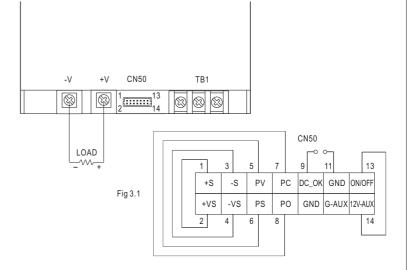

It indicates the output status of the PSU. It can operate in two ways: One is sinking current from external TTL signal; the other is sending out a TTL voltage signal.

3-1 Sink current:

The maximum sink current is 10mA and the maximum external voltage is 5.6V.

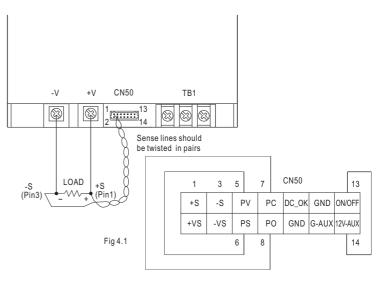

3-2 TTL voltage signal:

Between DC- OK(pin9) and GND(pin10&11)	Output Status
0 ~ 1V	PSU ON
3.3 ~ 5.6V	PSU OFF

4.Remote Sense

The remote sensing compensates voltage drop on the load wiring up to $0.5 \, \text{V}.$

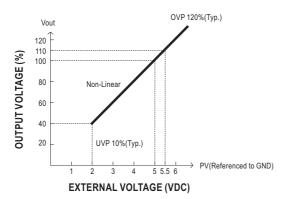

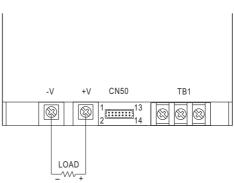

RSP-750 series

5.Output Voltage TRIM

Output voltage of RSP-750 can be trimmed between 40% ~ 110% of its rated value by the following methods: (1)Using an external DC source (2~5.5VDC) between "PV"(pin5) and "GND"(pin10,11) that is shown in Fig5.1

Note: External voltage<0.5V Vo may be the UVP need to restart.

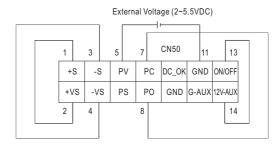

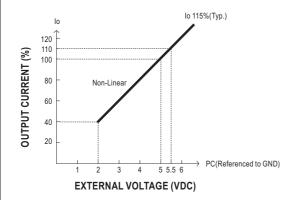

Fig 5.1

6.Output Current TRIM

Output current of RSP-750 can be trimmed between $40\% \sim 110\%$ of its rated value by the following methods : (1)Using external voltage source between "PC"(pin7) and "GND"(pin10,11) that is shown in Fig6.1

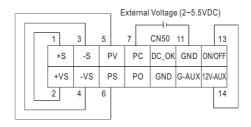

Fig 6.1
